CAREER OBJECTIVE

A B.Tech (CSE) student with hands-on experience building full-stack web applications using the MERN stack (MongoDB, Express.js, React.js, Node.js). Comfortable working across the entire stack — from REST API design and JWT authentication on the backend to responsive React frontends with Tailwind CSS. Looking for a full-time developer role where I can contribute from day one and grow with a team that builds things that matter.

EDUCATION

Parul University

B.Tech in Computer Science & Engineering

2023 – 2027

Vadodara, Gujarat, India

Telangana Board of Intermediate Education

Intermediate

2022

Telangana, India

PROJECTS

Cineboxd — Full-Stack Movie Tracking Platform | *React.js, Node.js, Express.js, MongoDB, Tailwind CSS, JWT*

- Built a Letterboxd-inspired MERN application with JWT authentication, bcryptjs password hashing, zxcvbn entropy-based password strength enforcement, RBAC (user + admin roles), and 18+ REST API endpoints across auth and movie domains.
- Integrated TanStack React Query v5 for server-state caching, background refetching, and optimistic updates; architected a centralised Axios service layer with request interceptors for automatic JWT injection across all API calls.
- Built 4 custom hooks (`useFetch`, `useLocalStorage`, `useToast`, `useIsMobile`) to eliminate repeated logic; deployed the React SPA to Cloudflare Workers edge network via Wrangler for globally distributed delivery.

FormEZ — Government Document Platform | *React.js, Node.js, Express.js, MongoDB Atlas, Mongoose, Tailwind CSS, Axios*

- Building a full-stack MERN civic-tech platform that converts complex Indian government document procedures into plain-English interactive guides, with a real-time Admin Console and 8 REST API endpoints (full CRUD + draft toggle).
- Designed a rich nested Mongoose schema encapsulating requirements, apply-step timelines, portal links, and FAQ accordions in a single document model for fast single-query reads; enforced strict DB boot validation with `process.exit(1)` on connection failure.
- Built a 5-tab dynamic Admin Add/Edit panel with real-time slug validation, comma-tag splitting into MongoDB arrays, and an `isActive` publish/draft toggle; centralised all HTTP logic in an Axios service layer decoupled from React components.

Personal Portfolio Website | *React.js, Vite, CSS3, JavaScript*

- Built a fully responsive portfolio with React.js and Vite; configured ESLint for code quality and leveraged Vite's optimised production build pipeline for fast load performance.
- Structured the codebase with scalable folder conventions and an HMR-enabled development workflow for rapid iteration.

TECHNICAL SKILLS

Frontend React.js, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Responsive Web Design, Vite

Backend / DB Node.js, Express.js, MongoDB, Mongoose, MySQL, REST API Design

Languages JavaScript, C++

Tools Git, GitHub, Docker, Kali Linux

Concepts Component-Based Architecture, RBAC, JWT Auth, Data Structures & Algorithms

ADDITIONALS

Certifications: CEH (Certified Ethical Hacker)
